

Company Basics

ID Verification Systems CC. was registered and implemented in Johannesburg, South Africa in October 2006.

Purpose

The cargo industry required an up to date & secure method of validating and identifying companies & individuals lodging or drawing cargo as part of a fraud prevention initiative.

System

All our software is based on a Cloud Computing Model and is hosted at Internet Solutions.

IVS uses an Oracle Database to store data and Oracle Apex as the User Front End.

Access

With the Cloud Computing model, we are able to give users access to IVS Systems' worldwide.

Company Verification

All companies and users registered with IVS are verified and validated before access is granted.

Permit Applications

All applications are submitted to the South African Police Service for criminal clearance.

Users are kept up to date with the process of their applications and can logon to our system and view the status of their applications whenever needed.

Identification

To verify an identity, the user scans in the permit into the IVS system, in return user will receive up to date information regarding permit holder. Permit holders' movements are logged in the IVS database with their cargo details and daily reports are sent to IVS clients.

Fraud Prevention

When a permit status shows invalid, the system users can act immediately as notification alerts are sent to Managers via sms/email informing Managers that there is an Alert at their facility.

Access Control

In addition to identification for cargo, the IVS system is used for access control at various key entry and exit points.

IVS has the capability to verify ID Numbers and IVS Permit Holders Online, capture passport details, vehicle details and log them electronically.

Live tracking of individuals & companies at various airlines, agents and public key points is made easy by IVS.

Security personnel can be notified by sms immediately on a flagged individual (monitoring of individuals as requested by certain entities).

The system enables access to multiple company buildings with one permit.

Time Management is another one of the benefits that the IVS Permit delivers to it's users.

Assisting Police Investigations

The system has been rolled out to the following regions :

Johannesburg
Cape Town
Port Elizabeth
Durban
George

A real time system, like the IVS System enables our clients to keep track of their employees on a countrywide level.

SA Police or Security can also be notified when a flagged individual (blocked \ monitored permit) enters a facility.

Reporting Information

The system automatically generates real time cargo reporting when cargo is lodged or drawn.

Daily reports are generated and sent to all registered companies.

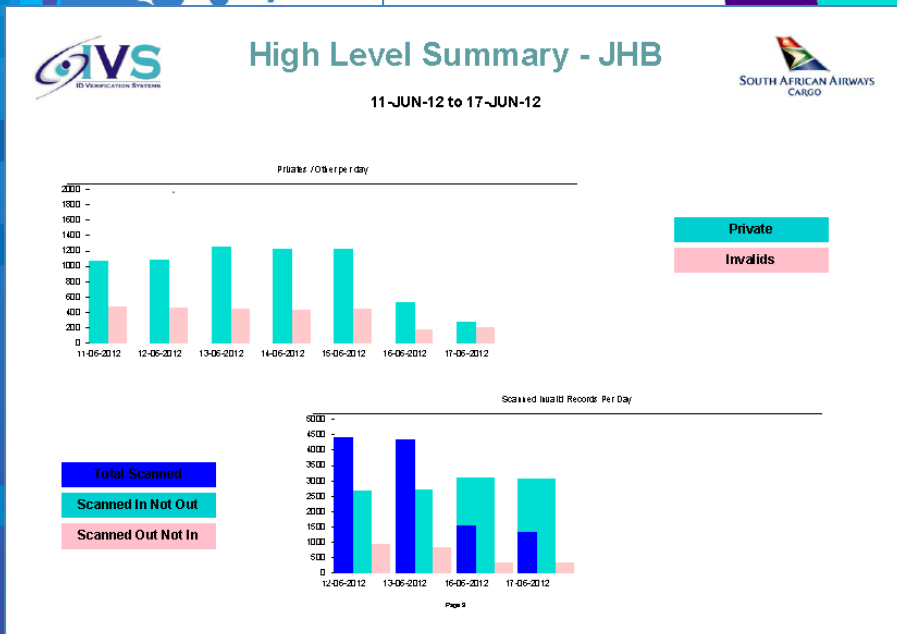

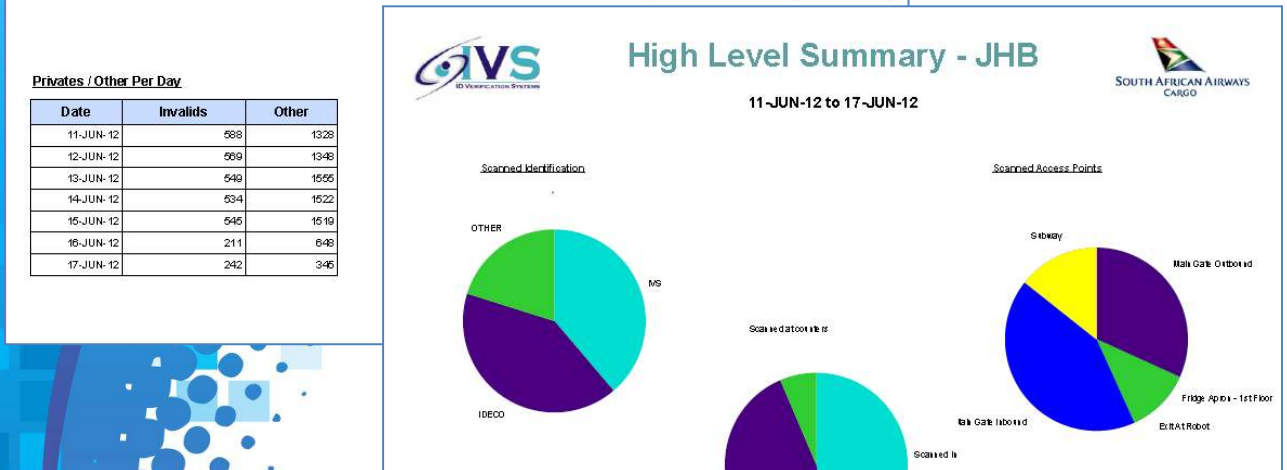

Up to date and correct information is sent to clients in a professional and efficient manner.

Weekly and Monthly reports are generated and sent to each company providing clients with summary view of all activities.

Custom reporting is just one of our extra added services.
